jouharhouda@outlook.com +212 771 10 01 30 Casablanca, Maroc

Profile

Full-stack engineer specialising in Java/Spring Boot. I build secure, reliable web applications, from APIs and authentication to the user interface, in close collaboration with clients and product teams.

Professional Experience — *Payment Center for Africa (PCA, Casablanca)*

TradeNet Project *September 2025 – Present*

- Development of an advanced reporting module with multi-criteria search and data aggregation from multiple sources.
- Delivery of two products, Reporting and Customs Guarantee, including user access rights and menu configuration.
- Migration of authentication to Keycloak with implementation of user-enabled MFA and an authenticator reset mechanism in case of lost access.
- Collaboration with business and technical teams for analysis and resolution of business issues.

Java | Spring Boot | React | PostgreSQL | SqlServer | Git

Entrepreneurial Support Process Digitalization *July 2024 – August 2025*

- Development of a full-stack Business Plan and Business Model platform with structured project data entry and automated financial calculations.
- Automated generation of business documents integrating project data and financial calculation results.
- Development of a chatbot connected to a dynamic knowledge base.
- Participation in business needs analysis through direct collaboration with the client in an Agile environment.

Java | Spring Boot | React | Keycloak | YARG | PostgreSQL | Liquibase | MinIO | Git

eLeasing Project *February 2024 – July 2024*

- Participation in the redesign of the client portal with development of business APIs and Keycloak integration through custom SPIs adapted to project authentication requirements.
- Modernization of interfaces and improvement of user experience in collaboration with business teams.

Java | Spring Boot | Spring Security | React | Keycloak | REST APIs | Git

Automation of Securitized Funds Management *August 2023 – February 2024*

- Participation in the development of a full-stack solution dedicated to the automation of securitization business processes in an Agile environment.
- Customization of the Keycloak login theme and integration of an authentication system adapted to project constraints.
- Development of features related to personalized document generation and file management.

Java | Spring Boot | Spring Batch | Liquibase | React | Keycloak | MinIO | REST APIs | Git

Final Year Project – Securitization *February 2023 – June 2023*

- Participation in requirements analysis and in the functional and technical design of a securitization system, including the development of a proof of concept covering the main business flows.

Java | Spring Boot | Spring Batch | Keycloak | REST APIs | Git

Education

2023 Engineering Degree in Computer Science — **ENSIAS**, Rabat
2020 Preparatory Classes (Math-Physics) — **Omar Ibn Abdelaziz**, Oujda
2018 Baccalaureate in Mathematical Sciences — **Lycée IBN EL HAYTAM**, Nador

Skills

Programming	Java, TypeScript, JavaScript
Frameworks	Spring, Spring Boot, Spring Batch, Spring Security, React
Architecture	Microservices, API REST, Architecture événementielle
Sécurité / IAM	Keycloak, OAuth2 / OpenID Connect, MFA
Databases	Microsoft SQL Server, MySQL, PostgreSQL
Development Tools	IntelliJ IDEA, Visual Studio Code, Git, Docker

Languages

Arabic Native language
French Good level
English Good level

Strengths

- Strong learning ability.
- Team spirit and sense of responsibility.
