jouharhouda@outlook.com +212 771 10 01 30 Casablanca, Morocco

Profile

Full-stack engineer specialising in Java/Spring Boot. I build secure, reliable web applications, from APIs and authentication to the user interface, in close collaboration with clients and product teams.

Professional Experience — *Payment Center for Africa (PCA, Casablanca)*

TradeNet Project *September 2025 – Present*

- Migrated authentication to Keycloak and added user-enabled MFA with a self-service reset in case of lost access.
- Built an advanced reporting module with multi-criteria search, aggregating data from multiple sources.
- Delivered two products, Reporting and Customs Guarantee, including role-based access rights and menu configuration.
- Worked with business and technical teams to analyse and resolve business issues.

Java | Spring Boot | Microservices | React | PostgreSQL | SQL Server | Git

Entrepreneurial Support Process Digitalization *July 2024 – August 2025*

- Built a full-stack Business Plan / Business Model platform with structured project data entry and automated financial calculations.
- Generated business documents automatically from project data and calculation results.
- Developed a chatbot connected to a dynamic knowledge base.
- Gathered business needs directly with the client in an Agile setting.

Java | Spring Boot | React | Keycloak | YARG | PostgreSQL | Liquibase | MinIO | Git

eLeasing Project *February 2024 – July 2024*

- Contributed to the redesign of the client portal: developed business APIs and integrated Keycloak through custom extensions (SPIs) tailored to the project's authentication needs.
- Modernized the user interfaces and improved the user experience, working closely with business teams.

Java | Spring Boot | Spring Security | React | Keycloak | REST APIs | Git

Automation of Securitized Funds Management *August 2023 – February 2024*

- Contributed to a full-stack solution automating securitization business processes, in an Agile team.
- Customized the Keycloak login theme and integrated an authentication system tailored to the project's requirements.
- Developed personalized document generation and file management features.

Java | Spring Boot | Spring Batch | Liquibase | React | Keycloak | MinIO | REST APIs | Git

Final Year Project – Securitization *February 2023 – June 2023*

- Analysed requirements and designed the functional and technical architecture of a securitization system, and built a proof of concept covering the main business flows.

Java | Spring Boot | Spring Batch | Keycloak | REST APIs | Git

Education

2023 Engineering Degree in Computer Science — **ENSIAS**, Rabat
2020 Preparatory Classes (Math-Physics) — **Omar Ibn Abdelaziz**, Oujda
2018 Baccalaureate in Mathematical Sciences — **Lycée IBN EL HAYTAM**, Nador

Skills

Programming	Java, TypeScript, JavaScript
Frameworks	Spring, Spring Boot, Spring Batch, Spring Security, React
Architecture	Microservices, API REST, Event-driven architecture
Security / IAM	Keycloak, OAuth2 / OpenID Connect, MFA
Databases	Microsoft SQL Server, MySQL, PostgreSQL
Development Tools	IntelliJ IDEA, Visual Studio Code, Git, Docker

Languages

Arabic Native language
French Good level
English Good level

Strengths

- Strong learning ability.
- Team spirit and sense of responsibility.
